

Bettws High School

Project overview

Electrical Services contract at the latest 'Newport Schools for the Future' project to develop a 'Sustainable' school for over 1100 pupils and provide the community with facilities including 25m swimming pool. The school has achieved the BREEAM 'excellent' rating through its use of energy saving services such as a mains and power distribution system with 'green energy' self-test and special lighting and fire alarm systems. Security is addressed by the installation of CCTV systems fully networked to a monitoring station. The school has an array of AEN teaching aids including projection equipment and interactive whiteboards in all classrooms.

Challenges

The application of new technologies into an existing environment combined with the day to day safety, quality and timescale needs of the project. This high profile project has an ambitious aim, to transform comprehensive education in Newport.

Solutions

The companies 'End2End' processes provide clear management to everyone involved. Our partnership with the main contractor is helping to ensure that all trades achieve a quality product that meets the needs of both education and community alike.
