

## Carmarthen Leisure Centre

### Project overview

Installation of the extensive Mechanical and Electrical services required to complete a comprehensive upgrade of the towns leisure centre; including swimming pool, sports/entertainment, retail/reception and administrations areas. Services include heating, hot and cold water, air handling, BMS control, CCTV, security systems, mains distribution, lighting and power, fire alarms, data systems and networks.

### Challenges

With the leisure centre operating throughout the project the safety of the public was the major priority. The challenge was to complete the contract within agreed timescales whilst adhering to strict quality and health and safety standards.

### Solutions

Whitehead developed and implemented a project plan that ensured all services were completed safely within deadline and on budget. Working closely with all stakeholder groups, processes were developed to ensure the safety of all people coming into contact with the site, including the general public and school children.
