

Whitehead Rail Services

Capability

We understand the market's unique challenges in terms of health and safety and continued customer service during works.

- Platform upgrades with minimal disruption
- Lifts, signals, lighting, PA and more
- Safe, reliable, accredited work in secure environments while platform in use
- System design, installation and commissioning, respecting existing platform architecture

Our experienced engineers are used to working alongside other trades in situations where platforms are required to stay open during works. Our careful project planning means we're able to ensure the safety of our own teams, those of other contractors and the public, all while causing minimal operational disruption.

Link-up

Whitehead has Link-up accreditation, reinforcing our expertise in the rail sector and ensuring our clients understand that they will receive the very best in transportation M&E services.

Link-up is managed by Achilles, and represents a quality standards pre-qualification process for working with e.g. Network Rail on vital transportation infrastructure. It proves that accredited business have both the quality and – even more importantly – the health and safety standards and process required to undertake works in the potentially hazardous rail environment.
