

Traffic and Management Centre

Project overview

The provision of Electrical Services within the Central Traffic and Management Centre, Coryton, Cardiff; a central Police traffic monitoring station, with 24hr CCTV coverage of every dual carriageway in Wales. The services provided include the complete power distribution (with UPS backup) and data networking systems, essential for uninterrupted operation; internal and external lighting and high specification CCTV security and surveillance systems.

Challenges

The installation of sophisticated systems within a high security environment with restricted working access was made even more challenging by the buildings location, within one of the busiest traffic interchanges in the city of Cardiff.

Solutions

The implementation of a highly efficient work plan developed using well established and proven 'End2End' process. The result was a close and flexible working partnership with everyone involved with the development.

Project title

» Traffic and Management Centre

Project Manager

» Steve Jones
